## Отчет по третьему заданию МРІ

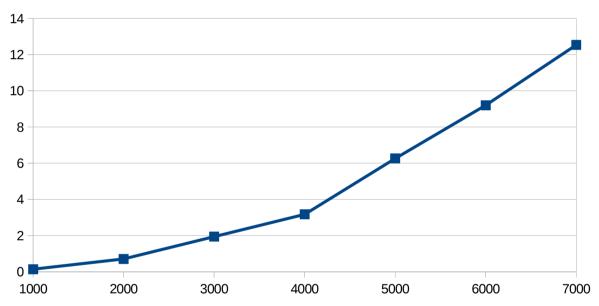

выполнил Женин Максим Николаевич, 523 группа maximham@mail.ru

Конфигурация системы: Своя система локальная 4 ядра

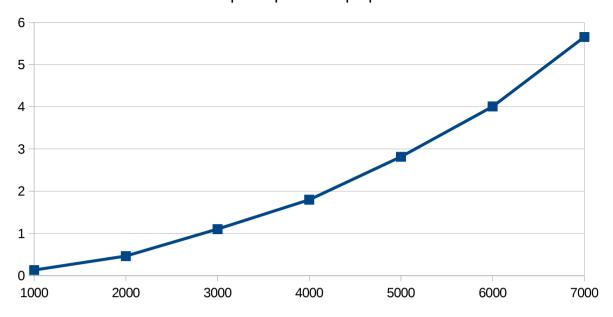

Выполнял программу с размером  $n = 1000 \dots 7000$ , при T = 100

Произвел замеры для 1 и 2 рабочих процессов(не включая мастер процесс), так как дальше на локальной машине графики замедлялись(не хватало ядер)

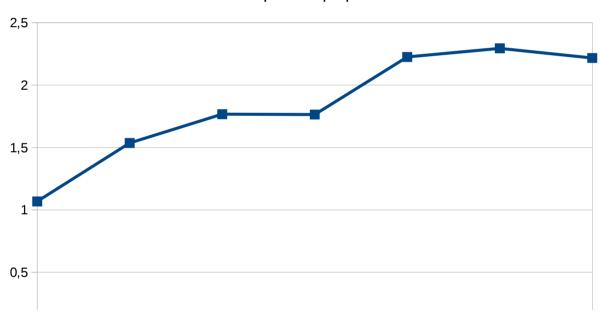

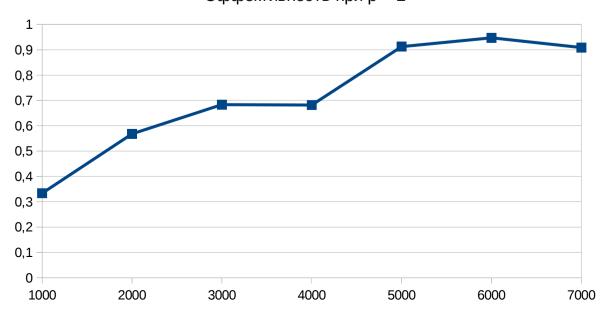

Время работы при р=2

Ускорение при р = 2

## Эффективность при р = 2
